Drilling to Commence at Donnybrook

Range Resources Limited (ASX Code: RRS) advises that a 10 hole reverse circulation drilling program will commence this week to target an anomolous zone identified by the Induced Polarisation survey exploration work carried out in February 2005 and subsequent modeling of the data from the survey.

The anomalous zone is situated in private land south west of the known gold reefs (eg Jackson's and New Reefs) and could be a chargeable source for the epithermal gold found in the area. The identified anomaly has not been previously drilled.

RRS has reached an agreement with the landowner, which entitles RRS to explore the identified zone.

Yours faithfully

MATTHEW LEWIS
Chairman
